

# Origami box

valley fold  
-----

mountain fold  
- - - - -

plain side up (although both or neither sides can have pattern or image or text)

1) Find the centre point of the square by folding into quarters.

Fold in half, open out, then fold in half again the other way, to make four panels.

Or you can find the centre point by measuring.

Alternatively, the square can be folded diagonally (into four triangular panels), to find the centre point.

2) Fold all four corners into the centre point.

3) Fold sides into the centre (where the four corners meet). Open out and repeat on each side.

4) Open out the top and bottom corners. then fold in sides to centre.

(looks a bit like a tie)

5) Bring sides out again and up to standing, to make the first two sides of the box.

(side view)

6) Pinch ends in, and collapse together to form other sides of the box. This bit is tricky, so keep practising! It will come.

7) Fold flaps over to meet inside the box. Hurray!
